DETAILED ACTION

1. Claims 1, 2, 4, 5 and 7-10 are presented for examination.

Allowable Subject Matter

2. Claims 1, 2, 4, 5 and 7-10 are allowed.

The following is an examiner's statement of reasons for allowance:

While Rudden teaches data in a returned device's memory is read out and then the utility company determines whether or not the customer has complied with the utility company's intent.

And Rudden teaches the recorded data is the date and time at which an override input was received.

And, Brown teaches a sound component in electronic communication with the processor generating audio from memory that responds appropriately to the then occurring memory operation instruction from the microprocessor.

Neither Rudden nor Brown, taken either alone or in obvious combination disclose a curtailment module for enabling an energy provider to send a request to curtail energy use to a user having all the claimed features of applicant's instant invention, specifically including: "a code generator stored in the memory and executable by the processor to generate a verification code using the curtailment message and the history data s inputs, the code generator also generating the audio verification based on the verification code to verify compliance with the request". It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
